Thank you for purchasing UNIDEN UV350

The UNIDEN UV350 is intended to provide enterprise connectivity and enjoys the advantages of today's smart devices and 4G LTE networks for everyday use at your work.

The device has a large 5.5" display and large, well-spaced keys and has been especially designed to allow you to use it safely and easily while driving.

The device has been developed taking into account the vehicle's environment; special requirements that a vehicle imposes for cellular device operation, with special emphasis on sound quality; dialing convenience and reaction time.

During the development, the device has undergone a strict series of tests, according to the standards relating to activity in the vehicle's environment.

This manual will help you discover the world of possibilities of the UV350 device. It contains information about the features and innovations that will help you operate the phone in the most convenient and effective way (some features require operator support).

Please read this manual and safety guide to ensure safe and pleasant use of the device.

The device must be installed by an Siyata Mobile Inc. approved qualified and professional installer.

Warranty is valid for one year with an invoice from an authorized Siyata Mobile Inc. dealer showing the purchase date.

If you have any questions or require support, please contact us at: support@siyatamobile.com

Safety Directives

Note: To decrease the risk of injury, please read the following important safety information before using this device. The manufacturer will not be held responsible for any damage resulting from non-standard use or usage contrary to instructions appearing in this manual.

Driving safely and in compliance with all applicable laws is your responsibility!

Road Safety!

Please check and abide by all applicable laws and regulations on the use of the device in a vehicle or when driving.

Service!

Do not disassemble the installed device or its accessories. In the event of device malfunction, please contact your nearest authorized service center.

Vehicles with installed airbags!

Airbags inflate with great power. When installing the device in the vehicle, the qualified professional installer must verify that the device is installed within a safe distance from the airbag. Any installation that blocks the inflating airbag might cause very serious injuries.

Vehicle systems!

The radio frequency (RF) signals might affect electronic systems inappropriately installed in motorized vehicles or that are not properly protected. Prior to installing any equipment in your vehicle, you should also consult with the equipment manufacturer for information on radio frequency signals.

Personal medical devices!

If you have personal medical devices, such as a cardiac pacemaker or hearing aid, it is recommended that you check with the device's manufacturers that it is protected against radio (RF) waves.

Hearing aids!

Digital wireless devices may interfere with hearing aids. In this case, consult the manufacturer of the hearing aids concerning alternative options.

Turning off the device in places in which there is a danger of explosions!

Where there is a danger of explosions, such as in a workplace involving explosives, fuel pumping areas, such as gas stations, areas in which the air contains chemicals, crop particles, dust or metallic powders and any area in which turning off a vehicle engine is recommended, the device must be turned off and the directions and signs at the site followed.

Warning signs!

Turn off the phone in the vehicle in places where there are warning signs. Follow all signs and instructions.

Antenna!

When installing the device, you must use only authorized cellular antenna. Any use of an unauthorized antenna, or changes or additions made to the antenna, might cause damage to the device and affect its quality of use.

Information about radio frequency signal exposure

In August 1996, the U.S. Federal Communications Commission (FCC) established a special standard on safety in human exposure to radio frequency energy and electromagnetic energy emitted from transmitters. The directions in the standard correspond with the safety standards previously established by the American National Standards Institute and international standards institutes.

The device in your possession operates in accordance with the FCC guidelines and international standards and operates within the permitted frequency range.

Handling the antenna

Use only the original antenna provided with the device or a replacement antenna approved for use by Siyata Mobile Inc. Using antennas that have not been approved for use by Siyata Mobile Inc., modifications or additions may cause damage to the cellular device and violation of the FCC regulations.

Do not use a damaged antenna. Skin contact with an antenna may cause a slight burn. In the case of damage to the antenna, contact the customer service center for getting a replacement antenna.

Note: additional, more detailed information on exposure to radio frequency waves may be found on the FCC's website at www.fcc.gov and on the Infocell website: www.infocell.org

This device complies with Industry Canada and CE standards.

The device operates in accordance with the Industry Canada and CE guidelines and complies within the permitted frequency range.

Disclaimers

- The UNIDEN UV350 device must be installed by an Siyata Mobile Inc. qualified professional installer.
- Siyata Mobile Inc. will not be responsible for any issues related to the device installation or for any damage to the vehicle resulting from the installation or from the use of the device in your vehicle.

7 SOS Function Key Configuration

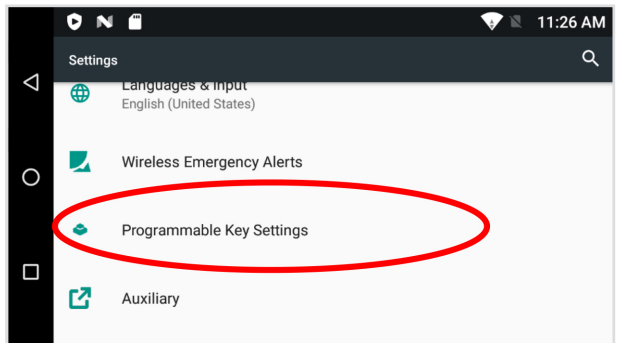

All Apps

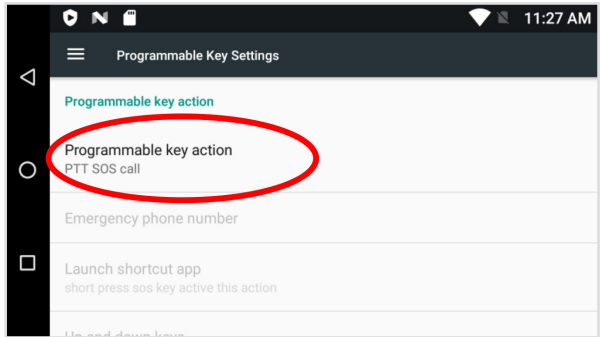

Settings

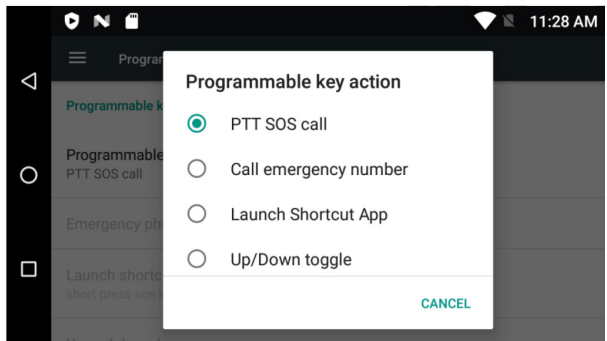

Select Programmable Key Settings

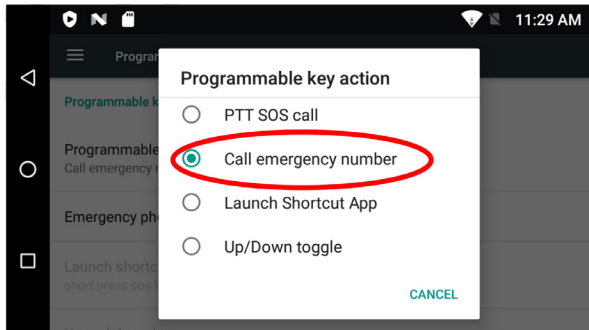

Select Programmable key action

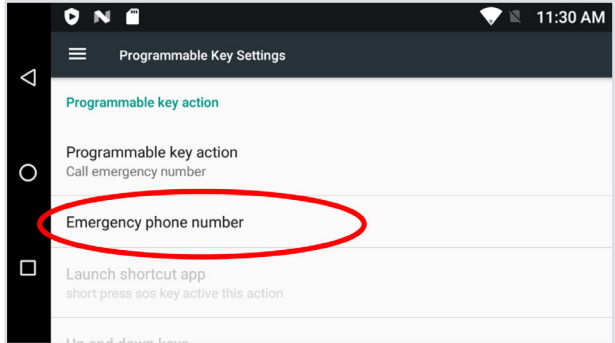

Default Setting is set for SOS call, you can select one of the selected options for your needs, for this demo we will set Call emergency number and define 911 as an emergency number.

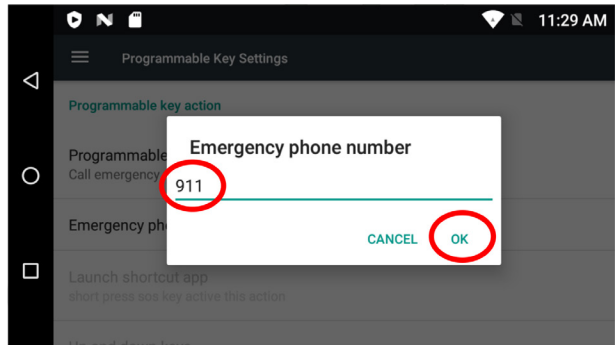

Select Call emergency number

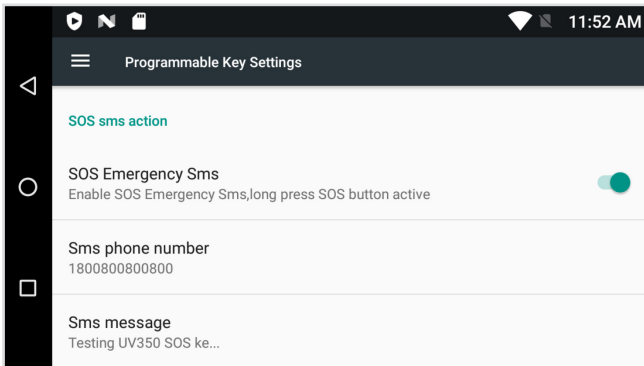

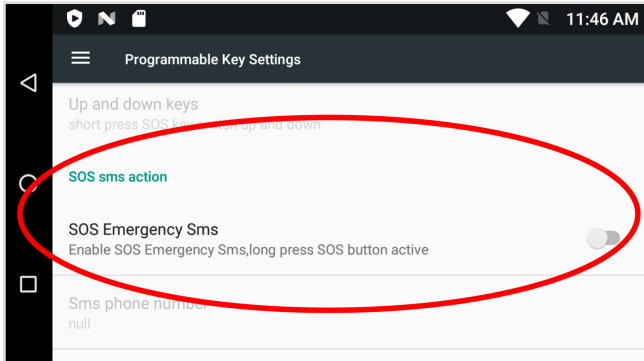

Select
**Emergency
phone number**
and set 911 as
an emergency
number

Press **OK** after
setting 911 as
an emergency
number

Under the same tree menu you can also define an SOS sms action, see below. Enable the check box in order to set a text message and phone number to be triggered once the SOS key is pressed.

Now, once SOS key is triggered, 2 things will occur in the following process:

1. Dialing to 911 emergency number
2. Texting an SMS message to predefined phone number XXXXXXXXXX with the following text message "Testing UV350 SOS key".
